

Owner Relations Intake Integration

Purpose

The Owner Relations Intake form captures an owner request and routes the submission through Microsoft 365 services for storage, structured tracking, and team notification.

Microsoft 365 Destinations

- Microsoft Forms: <https://forms.office.com>
- Power Automate: <https://make.powerautomate.com>
- OneDrive for Business: <https://onedrive.com>
- Microsoft Teams: <https://teams.cloud.microsoft>
- SharePoint: accessed through the Sample Energy Company team site and its channel files area

Workflow

1. Create and edit the Owner Relations Intake form in Microsoft Forms.
2. Create an automated cloud flow in Power Automate using the form-submission trigger.
3. Retrieve the submitted response details.
4. Create a structured item in the Owner Relations Intake SharePoint list.
5. Save the complete submitted response as an archive file in OneDrive for Business.
6. Post a selected summary to the configured Microsoft Teams channel.

Testing

Submit a test response through the form, then verify that:

- The SharePoint list contains a new item.
- OneDrive contains the complete-response archive.
- The Teams channel contains the expected notification.
- The Power Automate run history shows successful steps.

Notes

The SharePoint list provides structured records for future lookup and reporting. OneDrive remains the archive location for complete submissions, while Teams provides the collaboration notification.
